Providing accurate information on waste water cleanup practices is of paramount importance in developing successful implementation of global water treatment solutions

OAK PARK, Mich. – November 23, 2009 – George Alther, President/Founder of Biomin International, Inc., an Oak Park, MI-based oil and water separation/filtration company recently announced an upgrade and redesign of the Biomin website based on many global inquiries regarding various aspects of global wastewater treatment. "The website has been redesigned to improve the organization of information and create clearer navigation, making it easier to find what you're looking for. We've also modernized its appearance and improved legibility. An RSS feed has been added to give clients a convenient way to receive the latest updates from Biomin. A simple discussion forum was also added to allow questions and feedback to be posted to the site", said Alther.

One specific area includes a section about Mobile Wastewater Treatment Systems which is quickly becoming relevant in many developing countries. The website describes a highly mobile system which can be transported from village to village for local wastewater treatment. The system would have appropriate hoses for pumping out wastewater from local lagoons/water pits, processed through the system with two outputs, one for drinking water and one for processed water (used for agriculture/manufacturing facilities).

Biomin International is currently developing international contacts for synergistic markets associated with its patented Oilsorb technologies and is currently pursuing contacts for its Mobile Wastewater Treatment System. Joseph P. Cool, International Business Development/Export Director said "We are currently working with both domestic and international companies for development and implementation of Oilsorb methodologies and synergistic technologies for worldwide utilization including specific SE Michigan applications. Introduction of mobile wastewater treatment systems into developing countries significantly provides access for additional business opportunities due to the provision of local processed water for manufacturing and agricultural purposes".

About Biomin, Inc. (www.biomininc.com)

Biomin International, Inc. manufactures state-of-the-art water filtration media and flocculants for removal of oil, grease, and other organics (i.e. PCBs, PNAH, PCP, and color/tannin) from water. Biomin's products include OilSorb™, ColorSorb™, Clayfloc™, EC-300, and EC-400. Biomin filtration products are used throughout the world and have been approved for use by the U.S. Army Corps of Engineers, U.S. Environmental Protection Agency, U.S. Department of Defense, U.S. Department of Energy, the Iowa Department of Transportation, and other federal and state environmental protection departments. Its products have documented case study results that indicate cost savings up to 50% while bringing customer facilities into compliance with governmental discharge requirements.
