Introducing Organoclay in emerging market sectors is of paramount importance in developing successful implementation of global water treatment solutions

OAK PARK, Mich. – October 26, 2011 – Biomin International announces award of a large contract with Chem-Trade International for the supply of 400 tons of Organoclay manufactured locally in Oak Park. The contract is based on negotiations with several companies including the U.S. Environmental Protection Agency with the Organoclay being used in the State of Indiana. The Organoclay used in this project is based on one of the Emerging Market Sectors identified by George Alther, President/Founder of Biomin International Inc. several years ago. Basically, the Organoclay will be mixed with local sediments to fixate heavy metals and neutralize organic compounds commonly encountered in local and international waste water installations.

There are numerous sites like this one in Indiana across the country. Biomin had a project like this two years ago in Massachusetts. “To manufacture this we are buying a machine which will allow us to make Organoclays of a certain grain size in large quantities, like one million pounds. With this new machine, Biomin is certainly up to the task for this and future projects,” George Alther said.

Biomin International is currently developing international contacts for synergistic markets associated with its patented Oilsorb technologies and highly mobile wastewater treatment systems for rural usage. Joseph P. Cool, International Business Development/Export Director said “We are currently working with both domestic and international companies for development and implementation of Oilsorb methodologies and synergistic technologies for worldwide utilization including specific SE Michigan applications. News of this contract will certainly be communicated to potential global customers.”

About Biomin, Inc. (www.biomininc.com)

Biomin International, Inc. manufactures state-of-the-art water filtration media and flocculants for removal of oil, grease, and other organics (i.e. PCBs, PNAH, PCP, and color/tannin) from water. Biomin's products include OilSorb™, ColorSorb™, Clayfloc™, EC-300, and EC-400. Biomin filtration products are used throughout the world and have been approved for use by the U.S. Army Corps of Engineers, U.S. Environmental Protection Agency, U.S. Department of Defense, U.S. Department of Energy, the Iowa Department of Transportation, and other federal and state environmental protection departments. Its products have documented case study results that indicate cost savings up to 50% while bringing customer facilities into compliance with governmental discharge requirements.
